

# Nobody knows your body better than you.

If you have any of these symptoms it might suggest a problem with your pancreas, such as pancreatic cancer.

**Abdominal (tummy) pain which can spread to the back**

**Unexplained weight loss and loss of appetite**

**Jaundice (yellow skin or eyes)**

**Oily floating poo**

**Indigestion**

**If you have jaundice you should go to your GP without delay.**

If you have any of the other symptoms and they are unexplained or persistent (lasting 4 weeks or more), visit your GP. Remember, these symptoms can be signs of other conditions and may not be pancreatic cancer.
