

Pancreatic Cancer UK

Pancreatic Cancer | Northern Ireland

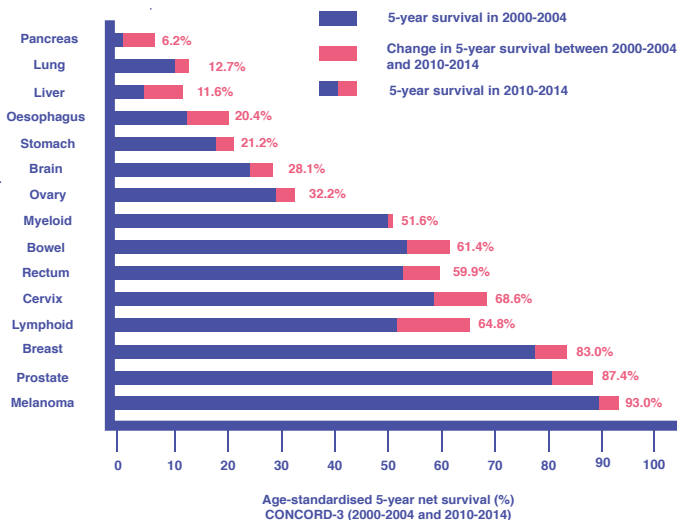

Pancreatic cancer is the deadliest cancer with the **lowest** survival of all cancers

Tough to survive

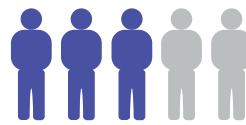

3 in 4 people with pancreatic cancer will die within a year

Pancreatic cancer
1-year survival = **23.8%**
5-year survival = **6.2%**

All common cancers
1-year survival = **73.3%**
5-year survival = **55.1%**

Tough to diagnose

3 in 5 people are diagnosed at a late stage where potentially curative surgery is not possible

Tough to research

Pancreatic cancer is historically underfunded in the UK, receiving only **1%** of the cancer research budget over the last decade

Government Underfunding

Pancreatic cancer research is heavily reliant on charity funding, with the government funding **5 times lower** than the charity sector

Below International Standards

Northern Ireland has one of the worst 5-year survival in the world, ranking **32nd** out of 36 countries with comparable data in CONCORD-3

Sources:

Queen's University Belfast: N. Ireland Cancer Registry

CONCORD-3: 5-year survival data for the period 2010-2010. All common cancers, represents the cancers available in CONCORD-3 which collectively represent 75% of all cancers diagnosed worldwide.
