Pancreatic Cancer UK

PCUK National Study Day Birmingham 7th Oct 2019

Early Diagnosis

Steve Pereira

Professor of Hepatology & Gastroenterology

Institute for Liver & Digestive Health, UCL

stephen.pereira@ucl.ac.uk

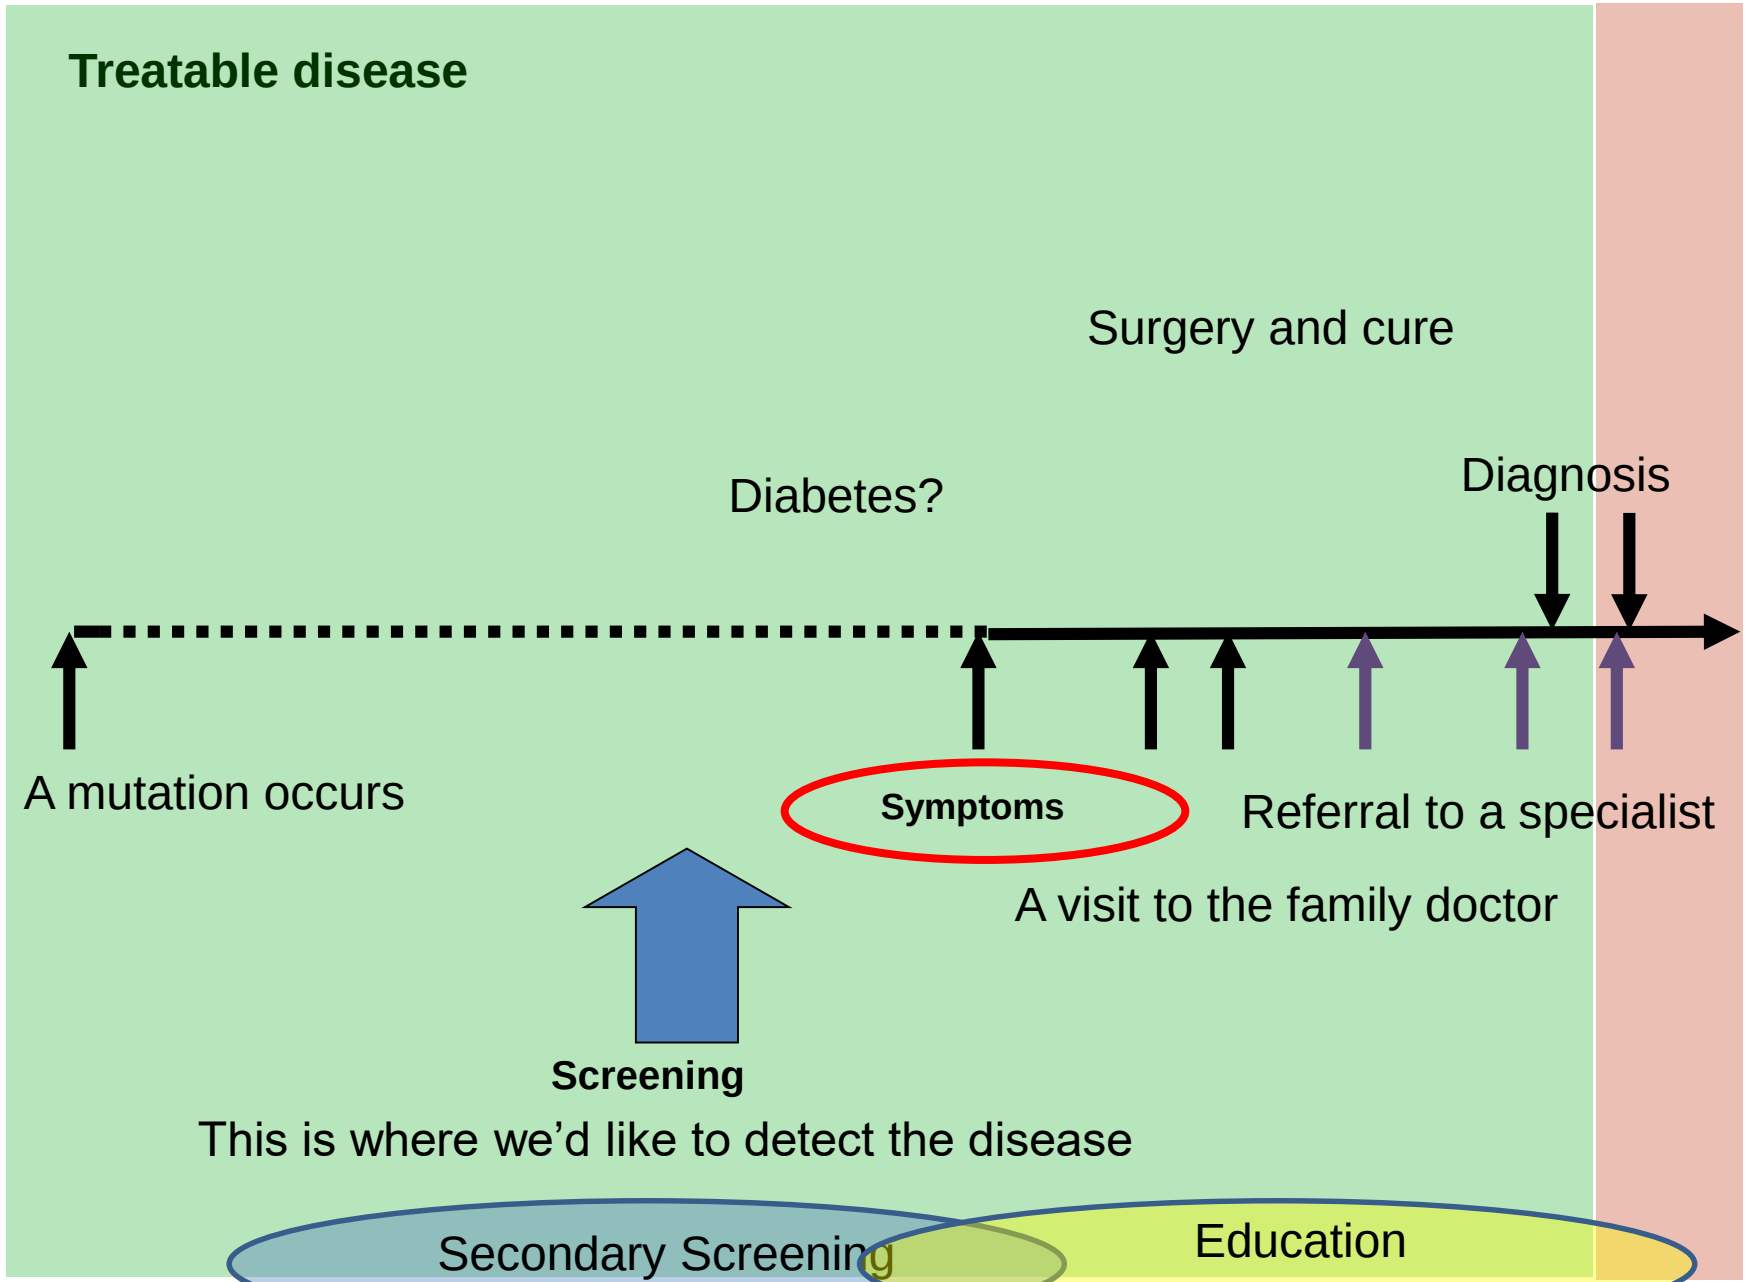
@PereiraGroup

Biomarkers for early diagnosis

Overview

- Identifying symptoms earlier
- Screening high-risk groups
- Emerging diagnostics
- The practicalities

Windows of opportunity for diagnosis of pancreatic cancer



Identifying symptoms earlier

- Existing cancer referral pathways are not very effective
  - ~90% do not yield a cancer diagnosis
  - 1/3 cancers diagnosed through this route
- Symptoms and signs are often too late
- 50% cancers present without recognised alarm symptoms

QCancer

Hippisley-Cox et al, 2013

Information Technology for GPs

Calculate risk

About you

Age (25-89): 68

UK postcode: leave blank if unknown

Postcode: B40 1PP

Clinical information

Smoking status: non-smoker

Alcohol status: non-drinker

Do you have...

- a family history of gastrointestinal cancer?
- a family history of breast cancer?
- a family history of ovarian cancer?
- type 2 diabetes?
- chronic obstructive airways disease (COPD)?
- endometrial hyperplasia or polyp?
- chronic pancreatitis?

Do you currently have...

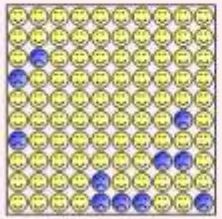
- loss of appetite?
- unintentional weight loss?
- abdominal pain?
- abdominal swelling?
- difficulty swallowing?
- heartburn or indigestion: indigestion
- rectal bleeding?
- blood in your urine?
- blood when you vomit?
- blood when you cough?

Your risk of having one of the following cancers, as yet undiagnosed is:

Cancer	Type	Risk
No cancer		89.05%
Any cancer		10.95%
	pancreatic	3.79%
	ovarian	2.12%
	other	1.67%
	colorectal	1.12%
	gastro-oesophageal	1%
	breast	0.46%
	renal tract	0.27%
	lung	0.2%
	blood	0.2%
	uterine	0.09%
	cervical	0.03%

You have a 10.95% risk of having a cancer as yet undiagnosed, and correspondingly, a 89.05% chance that you are clear.

In other words, in a crowd of 100 people with the same risk factors as you, 11 are likely to have a cancer as yet undiagnosed and 89 will not, as shown by the chart below.



Risk of a cancer as yet undiagnosed

Biomarkers for early diagnosis

Overview

- Identifying symptoms earlier
- **Screening high-risk groups**
- Emerging diagnostics
- The practicalities

UNIVERSITY OF LIVERPOOL

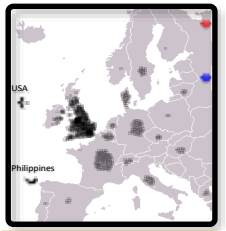
Liverpool Cancer Research UK Centre

Who should undergo surveillance?

‘High-risk’ cohorts: patients without symptoms

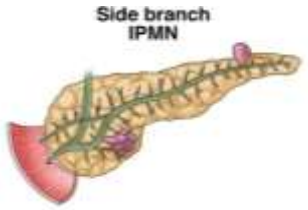
EUROPAC

The European Registry of Hereditary Pancreatitis and Familial Pancreatic Cancer



John Neoptolemos, Bill Greenhalf

- **Pancreatic cancer families (currently CT/MR, EUS)**
  - at least two relatives with pancreatic cancer
  - associated cancer syndromes with a case of pancreatic cancer



- **Cystic tumours of the pancreas (currently MRI, EUS)**
  ~1-13% of the population, increased pancreatic cancer risk

- **Pancreatic cancer-associated diabetes mellitus**

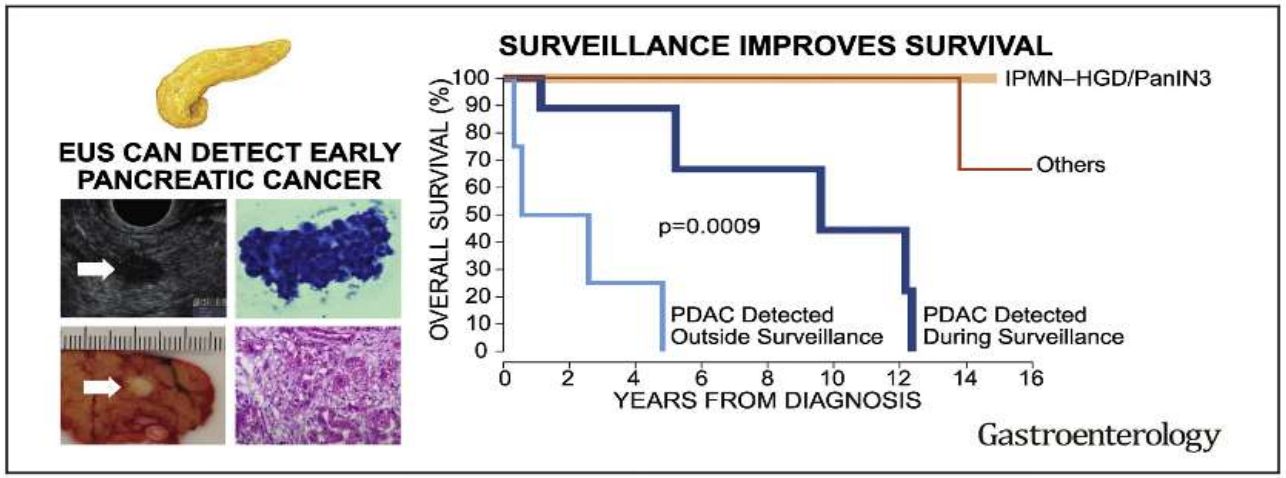
Gastroenterology

Risk of Neoplastic Progression in Individuals at High Risk for Pancreatic Cancer Undergoing Long-term Surveillance

Marcia Irene Canto,[1,2,*] **Jose Alejandro Almario,**[1,3,*] Richard D. Schulick,[4] Charles J. Yeo,[5] Alison Klein,[2] Amanda Blackford,[2] Eun Ji Shin,[1] Abanti Sanyal,[6] Gayane Yenokyan,[6] Anne Marie Lennon,[1] Ihab R. Kamel,[7] Elliot K. Fishman,[7] Christopher Wolfgang,[8] Matthew Weiss,[8] Ralph H. Hruban,[3] and Michael Goggins[1,3]

Gastroenterology 2018;155:740–751

- 354 High risk individuals for familial PDAC
- EUS/MRI and/or CT annual follow-up
- 16 year program. Median follow-up 5.6 years.
- Primary endpoint: cumulative incidence of PDAC, PANIN3, IPMN with HGD.



After initial screening:

- **7%** cumulative incidence of high risk pancreatic lesions (24/354)
- **3 yr survival of HRI with PDAC > other PDAC pts (57% vs. 8.9%)**
- Annual rate of malignant progression **1.6%**

Identification of Cystic Lesions by Secondary Screening of Familial Pancreatic Cancer (FPC) Kindreds Is Not Associated with the Stratified Risk of Cancer

Urine test to detect pancreatic cancer before symptoms of the killer disease show could boost survival rates to 60%, researcher predicts

- Pancreatic cancer is known as the 'silent killer' because survival rates are low
- The test detected the disease with 90 per cent accuracy in studies
- A charity said it was a 'breakthrough' that is 'desperately needed'

Tumor Detection

- ctDNA
- 8 Protein Markers
  - CA-125
  - CEA
  - CA19-9
  - PRL
  - HGF
  - OPN
  - MPO
  - TIMP-1

- 1,005 cancer patients (93 PDAC)
  - No distant metastasis (20% Stage I, 49% Stage II, 31% Stage III)
- 812 healthy controls

Biomarkers for early diagnosis

Overview

- Identifying symptoms earlier
- Surveillance of ‘high-risk’ groups
- Emerging diagnostics
- **The practicalities**

Population screening for PDAC is not feasible

- Screening for PDAC in average risk persons will fail due to low cancer prevalence
- Use of an “almost perfect test” with a 99% sensitivity and a 99% specificity for PDAC

New biomarker trials to detect upper gastrointestinal cancers earlier

17 Aug 2017

UCLH Cancer Collaborative has launched two new biomarker trials with the aim of developing simple and affordable tests that can detect upper gastrointestinal cancers earlier to improve survival.

The trials are for cancer of the pancreas – a large gland behind the stomach and next to the small intestine, and cancer of the oesophagus – the tube that connects the throat to the stomach.

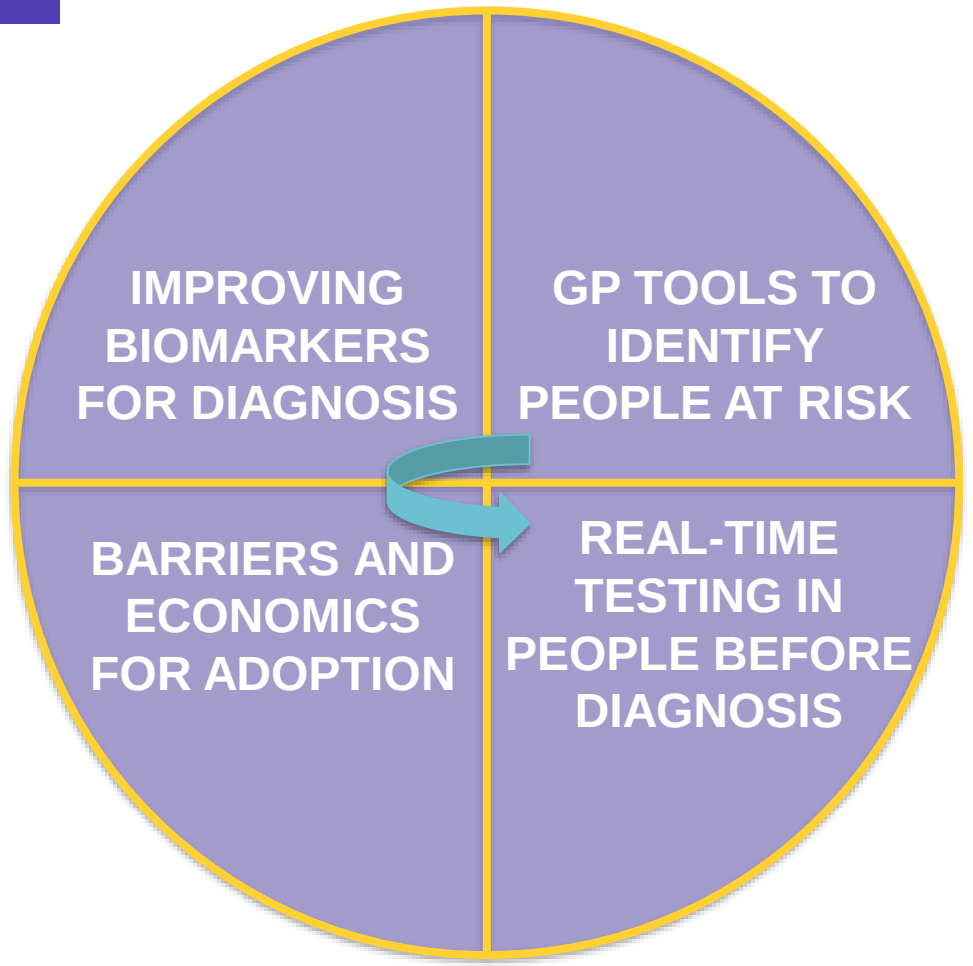
Accelerating diagnosis of pancreatic cancer: a 360° approach



Please note the deadline for the submission of proposals is **Monday 14th October at 5pm.**

NCRI Screening, Prevention & Early Diagnosis (SPED) Workshop

Call for proposal ideas for studies in Screening, Prevention or Early Diagnosis

NCRI National Cancer Research Institute

Current National Pancreatic Cancer Clinical Research SPED Studies Portolio:

stephen.pereira@ucl.ac.uk **(deadline 14 Oct 2019)**

- **EUROPAC**: The European Registry of Hereditary Pancreatitis and Familial Pancreatic Cancer
- **ADEPTS**: Accelerated Diagnosis of neuroEndocrine and Pancreatic TumourS
- **UroPanc**: Urinary bioamarker panel for early detection of Pancreatic cancer
- **UK-EDI**: UK Early Detection Initiative for Pancreatic Cancer

Non-commercial Open

Non-commercial Planned

Commercial Open

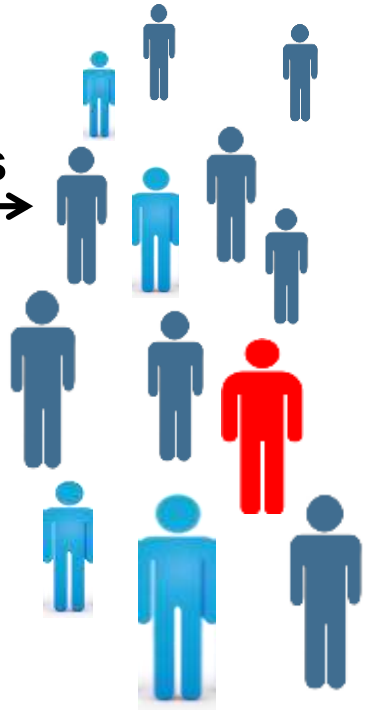
Aim of the UK Early Detection Initiative (UK-EDI)

To develop a test that will select a sub-population of new-onset diabetes individuals (which contains those with pancreatic cancer)

High risk group for pancreatic cancer

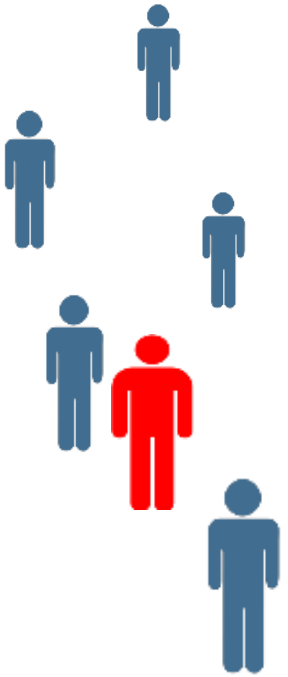
Biomarker(s) that enrich for type 3c diabetes

Higher risk group for pancreatic cancer

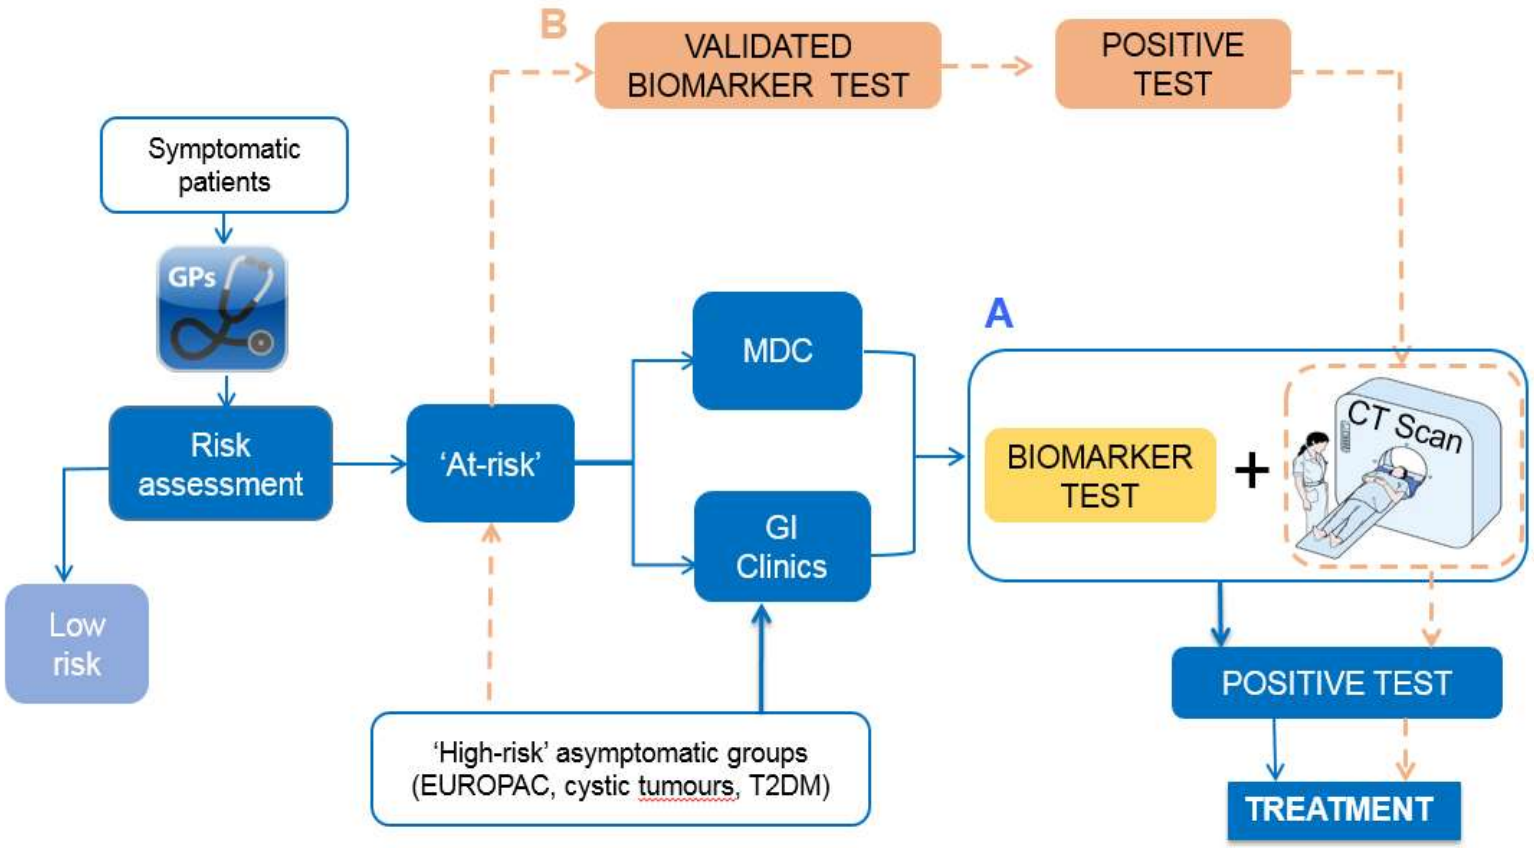


Future Screening

Imaging,
Biochemistry,
CA19-9,
Full blood counts



Accelerating diagnosis of pancreatic cancer



A Biomarker test panel added to 'standard' diagnostic pathway – for validation against CT result

B Validated biomarker test incorporated into 'new' diagnostic pathway

Accelerating early diagnosis research

2020 -

- Big data on risk factors and symptoms - decision support tools
- PCUK Early Diagnosis Research Alliance
- National sample collection
  - early stage pancreatic cancers
  - non-specific but concerning symptoms
  - familial PDAC, cystic tumours, T2DM, PSC
- Looking for new centres!
